Borders NHS Board

Meeting Date: 7 May 2020

Approved by:	Carol Gillie, Director of Estates and Facilities
Author:	Lettie Pringle, Risk Manager

COVID-19 RISK REGISTER

Purpose of Report:

The purpose of this report is to brief the Board on the risk register associated with the COVID-19 Pandemic.

Recommendations:

The Board is asked to:

- approve the strategic risk linked to COVID 19; and
- note the risks associated with COVID 19

Approval Pathways:

This report has been reviewed by the Board Executive Team on 28 April 2020 and the risks have been reviewed by the COVID-19 Pandemic Committee on 22 April 2020.

Executive Summary:

COVID 19 is significantly impacting on the business of NHS Borders resulting in a rapid pace of change into unchartered public health and service issues. The key risks for NHS Borders associated with COVID 19 need to be identified and addressed.

A strategic risk assessment relating to COVID-19 has been entered within the corporate risk register as an overarching risk assessment to the current overall risk to NHS Borders, which has been graded as a very high risk.

To support the organisation to manage this risk a COVID-19 risk register has been created.

- Due to pace and capacity the COVID 19 risk register is a rationalised format of the full risk register with a view to documenting only critical issues.
- As at 27th April 2020, 28 risks have been recorded on the risk register of which 1 is considered very high risk.
- The ownership of risks will sit with members of the Pandemic Committee and senior management of Clinical Boards.
- The Pandemic Committee will review risks on a weekly basis.
- Health and safety risks that have long term implications arising will continue to be recorded under the normal risk assessment process to ensure we are covering our legal responsibilities of providing suitable and sufficient risk assessments.

Impact of item/issues on:	
Strategic Context	As part of the COVID-19 response, a new risk register has been created to ensure that risk identification is recorded and monitored.
Patient Safety/Clinical Impact	This will ensure that any significant patient safety and clinical impacts directly relating to COVID-19 response are recorded and actioned
Staffing/Workforce	Risk management is included in existing managerial duties. Additional duties to cover COVID-19 risk register will require risk owners to liaise with the risk team
Finance/Resources	Requires no extra resources.
Risk Implications	Risk appetite tolerance levels have been highlighted for this risk register to ensure focus is given to the most significant risks
Equality and Diversity	Does not affect any persons/groups adversely
Consultation	Consultation with the Board Executive Team, Risk owners and Risk Management Board
Glossary	Risk Register – Tool to allow risks to be recorded. This enables risk to be quantified and ranked. It provides a structure as to how these risks should be treated, managed, monitored and how resources should be allocated.

Situation

COVID-19 is significantly impacting on the business of NHS Borders resulting in a rapid pace of change into unchartered public health and service issues.

Background

The key risks for NHS Borders associated with COVID-19 need to be identified and addressed. To support the organisation to do this a COVID-19 risk register, which is in a rationalised format, has been created.

Risks shall be entered centrally by the risk team following identification of organisational and service risks at the Pandemic Committee. Risk owners will liaise with the risk team to ensure all appropriate and specialist information is captured within these risks.

Assessment

A strategic risk relating to COVID-19 has been entered within the corporate risk register as an overarching risk assessment of the current overall risk to NHS Borders. This is currently graded as a very high risk and can be viewed in Appendix 1.

Due to pace and capacity the COVID-19 register is a rationalised format of the full risk register with a view to documenting only key issues.

NHS Borders Board should note the following linked to the COVID-19 risk register:

 Risks will be reviewed and updated following input from the risk owner and discussion at Pandemic Committee. The ownership of risks will sit with members of the Pandemic Committee and senior management of clinical boards. A list of all risk owners will be made available through the risk team intranet site.

- Risks that have been mitigated will be removed from the system but held by the risk team for a period of 2 years.
- Training in entering and managing risks within the risk register is being offered to all risk owners by the Risk Team.

As at 29th April 2020, the COVID-19 risk register has 26 risks recorded within it. These can be broken down as follows:

Current Grading	Number of Risks
Very High	0
High	13
Medium	13
Low	0

Diagram1: Risk levels as at 29.04.2020

The types of risks have been categorised to support the Pandemic Committee in monitoring the risks effectively. This is populated in a weekly report to the Pandemic Committee, a copy of which is attached as Appendix 2.

Type of Risk	Number of Risks
Business as usual	9
Financial governance	1
IT	1
ITU capacity	1
Medication	2
Oxygen	1
PPE	3
Reputational	1
Safety	4
Training	1
Wellbeing	1
Workforce	1

Diagram 2: Type of risks as at 29.04.2020

The full COVID-19 risk register is included as Appendix 3.

The Board is asked to note the following:

- Two risks have been identified relating to the patient mix within the Huntlyburn inpatient unit. The older adults normally cared for in Lindean ward within BGH are currently in the acute mental health unit in Huntlyburn. The second risk relates to Learning Disability patients boarding within Huntlyburn. As at Monday 27th April, older adults are due to return to the Lindean unit which will address the risks identified for Huntlyburn patient mix.
- Organisational Personal Protective Equipment (PPE) risk has been reduced from a very high risk to a high risk due to numerous controls, processes and monitoring in place to ensure that PPE is available to all appropriate staff in NHS Borders.

It should be noted that all health and safety risks that have long term implications arising should continue to be recorded under the normal risk assessment process to ensure we are covering our legal responsibilities of providing suitable and sufficient risk assessments, included in Appendix 4. There is currently one health and safety risk that has been identified as a result of COVID-19 response associated with the purchase of beds through national procurement where aspects of the bed set up differ from NHS Borders usual Enterprise 5000 beds. The risk also highlights training in using these beds and moving and handling issues associated with them. This risk is graded as a very high risk with a view to managing this risk down by removing the beds from use and only using them in exceptional circumstances.

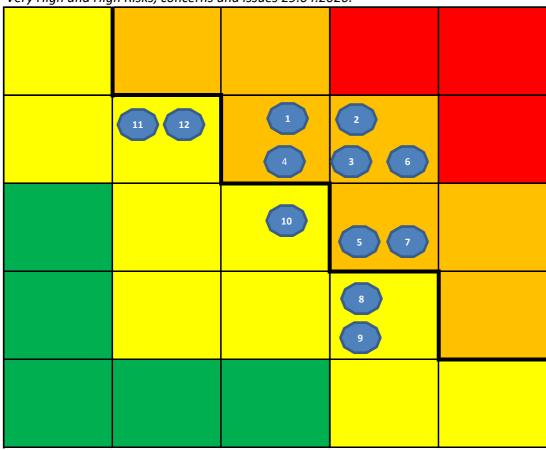

COVID19 Strategic Risk As at 27.04.2020.

1701 COVID-19 (He. Safety Risks or	Berry, Nicky bed	R. M.	dditional Hill- om and ledstrom beds ave been rought into the GH for Covid- 9 Wards, these lifter from the tandard Arjo nterprise 5000 ed used in nost of the ospital.	pressed to drop the rails. Mattress does not fit in the frame guides, as a result of the larger mattress size they push on the raised bed rails which may affect operation. Manual CPR handle did not operate on one of the beds in Ward 16, requiring significant strength to pull and at times did not activate override. Query over bed maintenance prior to being supplied to the BGH. No nurse control unit at the foot of the bed, control different from standard beds. Controls vary between the Hill Rom beds, no CPR function on controller, unable to identify if controls can be locked out to prevent operation. The beds are a different make and model fron the standard BGH beds, staff have no training on the beds. Medstrom 5000 Medstrom 5000 Bed rails do not retract to the same level as the bed frame. Gap between edge of mattress and bed rails. CPR handle in a different position from standard beds, located at the top of the bed. No nurse control unit at the foot of the bed, control different from standard beds. Locking out functions appears to require a special tool. Bed can be lowered into an ultral owp position. The	to manually over ride them. The stiff button requires staff to jiggle the rails to get the button to release which also jiggles the mattress and patient. The over sized mattress makes locking the rails into place and lowering them difficult and could lead to musculoskeletal injuries. The damaged CPR override may prevent the bed from being placed in the optimum position for resuscitation. Or lead to musculoskeletal injuries as staff members attempt to operate it. The lack of control unit at the bottom of the bed requires the staff member to get to the head of the bed, close to the patient to operate it. The lack of control unit at the bettom of the year on the other side. The inconsistent controls between the Hiller most saff and lead to delays in operating the bed or the bed left in a less then optimal position for the patient. The lack of control lock out, could result in a patient lowering the bed when they are liable to be crushed. The lack of staff familiarity and training on the beds may lead to delays while staff work out how to operate the beds. In particular staff will be unfamiliar that they must use a manual CPR pull on the frame to lower the bed due to the lack of button on the controller. Staff are at risk of musculoskeletal injuries as they may be unfamiliar with the handling characteristics of the bed. Medistrom 5000 As the bed rails do not retract level with the frame, patients whilst transferring lateral from the bed across the rails are at risk of discomfort/pain and skin clamage as place their weight effectively onto the rail when the mattress compresses. The gap between the bed rail and mattress could result in patients arms and for some patients legs becoming entrapped. The different location and style of manual CPR control could result in delays in positioning the bed for resuscitation. The lack of control unit at the bottom of the bed requires the staff member to get to the head of the bed, close to the patient to operate it. Or will result in them leaning over the bed/patient to operate	- Patients could die if the operate the bed whilst they are under the bed or if it cannot be placed in a optimal CPR position Patients may attempt to rish attack they are at the head of the bed using the controls Poor care experience - Bad publicity - Sickness/Absence - Claims - Financial loss - Prosecution under the Health and Safety at Worl Act, Provision and Use of Equipment Regulations at the Manual Handing Operations Regulations	Adverse publicity/ reputation, Financial/ Economical (Including damage, loss, fraud), Legal, OH&S Activity, Patient Safety/ Clinical Risk/ Clinica Activity, Staffing and Competence	09/04/2020	Extreme (5)	Likely (4 Strong possibility that this could occur)	V High High (20) (12	gh Toler	- Staff are trained in manual handling Resuscitation training will cover that manual CPR handles are fitted to electric profiling beds in case of power loss Control units are fixed to the frame on the Hill Rom beds Power could be switched off to bed to prevent a patient operating the control unit Staff aware to check area for obstructions/caught items prior to lowering bed or rails Falls assessment completed on admission - Staff would airready be wearing PPE when approaching close to patient PMAV training - Medstrom bed has a CPR button on the control unit.	Hill Rom - Bed rails difficult to operate if unfamiliar with bed Size of mattress impacts on bed rail use Damaged manual CPR on makes the bed inconsistent in placing in resuscitation position Staff unfamiliar with controls Unable to lock controls out. Medstrom - Height of bed rails for patient transfer - Gap between mattress and rails on Medstrom bed Staff unfamiliar with controls Unable to lock controls out without tool Lack of maintenance support and parts availability on site.	01/10/2020	01/10/2020	dentify where hese beds are emove off site with control egarding only sing in extreme ituations.	27/04/2020 27/04/2020
